TABLEAU DASHBOARD PROJECT

IKEA Product Pricing and Category Analysis Dashboard

Student Name	Vijay Bisht
Roll No.	T004
Class / Batch	TYIT / Batch 1
Subject	Data Visualization with Power BI and Tableau
Academic Year	2026-2027

Submitted to: Sumit Tripathi

1. Project Title

IKEA Product Pricing and Category Analysis Dashboard using Tableau

2. Objective

The objective of this project is to analyze IKEA product and pricing data using Tableau and present it through an interactive dashboard. The project was undertaken to understand product categories, pricing patterns, discounts, expensive products, and store locations, and to convert the available data into meaningful visual insights for better business understanding.

3. Project Description

This project uses Tableau to analyze IKEA product data through different visualizations. The dashboard includes product price analysis, category comparison, discount analysis, a price-range line chart, store location mapping, product clustering, and the Top 10 most expensive products. Filters and calculated fields are used to explore the data interactively and identify patterns that can support pricing and product-related business decisions.

4. Dataset Details

Parameter	Details
Dataset Name	IKEA Product and Store Location Dataset
Source	IKEA product and store location data in CSV format
Number of Records	3,701 combined records
Important Fields	Sales, Profit, Quantity, Category, Region, Date, Product

5. Tools & Technologies Used

- Tableau Desktop/Tableau Public
- Microsoft Excel / CSV (for dataset)
- Data Visualization and Dashboarding

6. Tableau Worksheets/Charts

Visualization	Purpose
KPI – Total Products	Shows the total number of unique IKEA products.
Discount Analysis	Shows the number of products across different price/discount ranges.
Product Price Distribution – Line Chart	Shows how the products are distributed across different price ranges.
IKEA Store Location Map	Shows IKEA stores according to their geographical locations using city, latitude and longitude.
Product Category Clusters	Shows product categories using product-related values and dimensions.
Top 10 Most Expensive Products	Displays the 10 products having the highest prices.

7. Calculated Fields

The following calculated fields were used in the Tableau project.

Total Products

```
COUNTD([item_id])
```

Average Price

```
AVG([price])
```

Maximum Price

```
MAX([price])
```

Minimum Price

```
MIN([price])
```

Old Price Numeric

```
IF [old_price] = "No old price" THEN  
    NULL  
ELSE  
    FLOAT([old_price])  
END
```

Price Difference

```
[Old price numeric] - [price]
```

8. Dashboard Screenshot

9. Key Insights

1. The majority of IKEA products are concentrated in the low-to-mid price range, while premium products represent a smaller segment.
2. Discount analysis reveals that selected categories provide substantially greater customer savings than others.
3. Price difference analysis highlights products where customers receive the largest absolute savings.
4. Category-wise analysis shows significant variation in average product prices across IKEA's product range.
5. IKEA stores are mainly located in major cities, showing the geographical distribution of its stores.

10. Video Demonstration
